

ABSTRACT

An appliance or equipment utilizing water includes an operation section provided on top or side of a main body of the appliance and an outer member. The outer member includes a transparent member, a transparent film formed thereon, and a colored decoration provided on a surface of the transparent member opposite to the transparent film. The operation section is comprised of only the transparent film. In accordance with the appliance of the present invention, a transparent texture quality in outer appearance as well as a depth and classic texture quality in design can be obtained and at the same time a stereovision of characters or figures on an outer surface of the appliance can be provided.
